June 1, 1999

Dear FDA,

Stop xenotransplantation
Now. 0461 99 JUN-4 11:01:11

There has not been sufficient public debate.

There are safer, more cost-effective alternatives that should be explored by regulatory authorities.

Pigs are no safer than non-human primates. Many viruses have devastated humans and pigs alike.

Why did the FDA fail to perform an environmental impact statement before allowing clinical ~~xenotransplantation experiments?~~

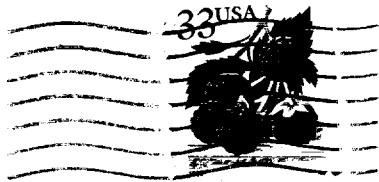

Stop this extremely dangerous practice now!

Sincerely,
Jane Katz
